

Control of silvery thread moss in creeping bentgrass greens treated July 17 and July 31 (Ross, Alberta, 2012)

Researcher: Jim Ross, Prairie Turfgrass Research Center
Location: Edmonton, AB

Test Methods

Target species: Silvery thread moss, *Bryum argenteum*

Crop/Site: Creeping bentgrass practice green

Treatment Application Date(s): July 17 and July 31, 2012

Commercial Standard: Quicksilver (carfentrazone)

Evaluation Interval: Reduction in moss infestation assessed on July 31, Sept. 7, and Sept. 28

Plot Description: 1/4 m² plots in a randomized complete block design

Conclusion: Moss-Aside significantly outperforms the industry standard at three different application rates.
