

Active Ingredient: Ammonium soap of fatty acids 22.10%

### **Protect parks, gardens, and public greenspace from giant hogweed with Finalsan® Grass and Weed Killer.**

Also known as cartwheel-flower, wild parsnip, wild rhubarb, giant cow parsnip, or giant cow parsley, giant hogweed is a large noxious weed that is affecting communities across Canada. Originally introduced to eastern Canada as a garden ornamental, the plant is growing unchecked in many parts of the country<sup>1</sup>.

In addition to displacing native species, giant hogweed produces phytotoxic sap that causes severe burning and blistering on human skin and can temporarily or permanently cause blindness<sup>2</sup>.

Fortunately, recent data from trials conducted at the University of Guelph Plant Agriculture Department confirms that Finalsan from Neudorff is an effective method to quickly kill this dangerous weed.

From the report: "Finalsan alone when applied only once provided good control of Giant Hogweed at 2 and 7 DAT [days after treatment]. The second application of Finalsan (applied 20 days after application 'A') provided excellent full season control of this weed at all growth stages."
